Location: Dubai, UAE | Open to roles across the GCC

Immediate joiner | Willing to relocate | Indian national

7+	AWS	SOC2	Kubernetes
Years in DevOps / SRE	Certified Solutions Architect	Compliance programme owner	Helm, HPA, Ingress, Argo CD

PROFESSIONAL SUMMARY

DevOps / SRE Engineer with 7+ years of experience running secure, highly available AWS infrastructure. Hands-on with **Kubernetes, EKS, Terraform, CI/CD (Jenkins, Argo CD, GitHub Actions) and SOC2 compliance**. AWS Certified Solutions Architect – Associate. Led the company's SOC2 programme, helped make deployments ~50% faster and cut S3 storage by ~28%. Looking for DevOps, SRE, Cloud or Platform Engineer roles across the GCC.

CORE SKILLS

Cloud (AWS)	EC2, ECS, S3, RDS, Lambda, Glue, Step Functions, VPC, VPN, Route 53, IAM, CloudWatch, CloudTrail, Inspector, ACM, SNS
Containers & K8s	Kubernetes, EKS, OpenShift, HPE Ezmeral, Docker, Helm, HPA, Ingress controllers
CI/CD & IaC	Jenkins, GitHub Actions, Argo CD, Terraform, Ansible, Git, GitHub
Scripting	Python, Shell scripting
Monitoring	Grafana, PromQL, CloudWatch, EFK / Kibana, Slack alert integrations
Security & Compliance	SOC2, Vanta, DevSecOps, vulnerability management, IAM (least privilege), SSO/SAML, SSL/TLS, firewalls, DDoS protection
Systems & Networking	Linux (RHEL, Ubuntu), Windows, Tomcat, RAID, Site-to-Site VPN, SFTP, high availability, root cause analysis
Tools	Jira, Confluence, Slack

PROFESSIONAL EXPERIENCE

DevOps & NOC Engineer | Eltropy

May 2021 – May 2025

- **Compliance:** Built the company's SOC2 programme from the ground up and ran it end to end. Planned and executed every audit cycle, managed control mapping and evidence collection in Vanta, kept the company audit-ready year-round and supplied SOC2 reports to credit union customers on request.
- **Security:** Led quarterly vulnerability management across EC2, Lambda, AMIs and S3 using Vanta reports and AWS Inspector, working with the internal security team. Triaged findings by severity, fixed critical and high issues immediately and significantly reduced open vulnerabilities each quarter. Hardened S3 and enforced secure AWS baselines and least-privilege IAM.
- **Patching & golden AMIs:** Remediated CVEs, including kernel-level patches, using Inspector's recommended package fixes. Built golden AMIs and rolled them out through launch templates and EC2 Auto Scaling groups, testing in lower environments before production.
- **Kubernetes:** Migrated applications from EC2 to Kubernetes on Amazon EKS. Set up namespaces, HPA, Ingress and Helm charts for consistent deployments and fast rollbacks, which improved scalability and resource use.
- **CI/CD & releases:** Designed and optimised CI/CD pipelines with Jenkins, Argo CD, GitHub Actions and Terraform, helping make deployments ~50% faster. Ran end-to-end releases with QE, Dev, Engineering and Analytics using deployment checklists and strict testing.
- **Infrastructure as Code:** Deployed Site-to-Site VPN tunnels with Terraform, working with customer firewall teams. Managed SFTP, SSO and SSL/TLS certificates (AWS ACM, DNS validation).
- **Monitoring & incidents:** Built CloudWatch alarms wired to Step Functions, SNS, Lambda and Slack. Resolved 5xx errors, Kibana uptime issues, token refresh failures and analytics DB outages, and wrote up the fixes as SOPs.
- **Reliability:** Reduced mean time to recovery (MTTR) by automating fixes with Ansible and health checks and making quick operational calls during incidents.

- **Cost optimisation:** Cut S3 storage from ~50 TB to ~36 TB (~28%) in two months using versioning and lifecycle policies (cold tier after 30 days, deletion after 60). Worked with QA and Dev teams to decommission unused resources and right-size infrastructure. Automated RDS start/stop scheduling and added cost-allocation tags.
- **Linux & data pipelines:** Hardened and patched Linux EC2 hosts (users, systemd, log rotation). Supported data engineering workflows on Lambda, Glue and Step Functions.

DevOps / Infrastructure Engineer | Hewlett Packard Enterprise — Mar 2018 – May 2021

- **Kubernetes platforms:** Built HPE Ezmeral and Red Hat OpenShift Kubernetes environments from scratch during their early-stage adoption.
- **Infrastructure:** Deployed and managed Linux, Windows and virtualised infrastructure for business-critical enterprise workloads.
- **Automation:** Automated infrastructure deployment and routine management tasks, cutting manual effort and standardising builds.
- **Incident management:** Ran root cause analysis on infrastructure incidents and put preventive fixes in place.
- **Capacity & storage:** Monitored system health, utilisation and capacity, and designed RAID storage for data integrity and redundancy.
- **Change control:** Validated changes through testing and controlled rollouts, in line with security and access-control policies.

IT Analyst | STS Infotechnologies (vendor for Cisco) — Jul 2015 – Jan 2016

- Supported Cisco employees with Webex, Jabber and mobility tools, troubleshooting remotely and documenting standard fixes.
- Configured Cisco mobility and networking solutions for enterprise users.

CERTIFICATIONS & TRAINING

- **AWS Certified Solutions Architect – Associate**
- DevSecOps Essentials | DevOps Essentials | Git Complete
- Complete Python Bootcamp | Complete Guide to Elasticsearch | Data Visualization with Kibana

EDUCATION

B.E., Electronics & Communication – Visvesvaraya Technological University (VTU), India

PERSONAL DETAILS

Nationality	Indian
Availability	Currently in Dubai. Available to join immediately and willing to relocate.
Degree attestation	Completed for UAE (including MEA, UAE Embassy and MOFA)
Languages	English, Hindi, Urdu
