Nadeem Ahmed

DevOps | SRE Engineer

SUMMARY

DevOps/SRE Engineer with 7+ years of experience managing AWS infrastructure, Kubernetes (EKS), CI/CD pipelines, and security compliance (SOC2, vulnerability management). Skilled in Terraform, Python, and Linux systems administration, with a strong track record of improving deployment reliability, cloud security posture, and cost efficiency.

Certifications

- AWS Certified Solutions Architect Associate
- Complete Python Bootcamp
- DevSecOps Essentials
- Complete Guide to Elasticsearch
- DevOps Essentials
- Git Complete
- Data Visualization with Kibana

Skills

Cloud & Platforms:
AWS (EC2, ECS, S3, RDS, Lambda, Step Functions, Route 53, SNS, CloudWatch, CloudTrail, Inspector, ACM, Workspaces, VPC, VPN), Kubernetes (EKS), Docker

CI/CD & Automation:
Jenkins, GitHub Actions, ArgoCD, Terraform (IaC), Shell Scripting, Python, Ansible

Monitoring & Observability:
Grafana, PromQL, Kibana, CloudWatch, EFK, Slack Integrations

Security & Compliance:
SOC2, DevSecOps, IAM, SSO/SAML, SSL/TLS (ACM), DDoS, Firewalls, Vanta

Systems & Infrastructure:
Linux (RHEL, Ubuntu), Tomcat, RAID, HA Architecture, Root Cause Analysis, Infra Provisioning (QA, Dev, UAT, Prod)

EXPERIENCE

05/2021 - 05/2025

Eltropy - DevOps & NOC Engineer

SOC2 Compliance & Security: Owned SOC2 compliance program end-to-end — managed recurring audit cycles, coordinated evidence collection, and maintained control mappings in Vanta, ensuring continuous audit readiness through established security governance processes.
Vulnerability Management: Led vulnerability remediation using AWS Inspector — identified security findings, applied patches through controlled workflows, validated fixes via testing, and promoted updates safely to production.
Cloud Security Implementation: Enforced secure baseline configurations across AWS services (data protection, access controls, monitoring) to maintain data integrity and minimize security risk across production environments.
Infrastructure as Code (Terraform): Worked with Terraform for the deployment and configuration of Site-to-Site VPN tunnels, collaborating with customer firewall teams to ensure secure and reliable connectivity.
Release Management: Managed end-to-end deployment activities, coordinating with QE, Development, Engineering, and Analytics teams; created deployment checklists and enforced rigorous testing protocols to reduce release risk.
CI/CD Pipeline Management: Enhanced deployment workflows using Jenkins, Argo CD, and GitHub Actions to improve release reliability and shorten release cycles.
Containerization & Kubernetes (EKS): Migrated applications from EC2 to Kubernetes; deployed and managed containerized workloads on Amazon EKS, configuring namespaces, Horizontal Pod Autoscaler, and Ingress controllers, and integrating Helm charts for standardized deployments and rapid rollbacks — improving scalability and resource utilization.
Monitoring & Observability: Designed and extended monitoring and alerting solutions to provide real-time visibility into system performance and reliability; built recurring CloudWatch alarms integrated with Step Functions, SNS, and Lambda for automated alerting.
Data Engineering Support: Optimized data engineering infrastructure by managing and troubleshooting workflows built on AWS Lambda, AWS Glue, and Step Functions.
Incident Management: Monitored system health via Slack integrations; troubleshot incidents including 5xx errors, Kibana uptime issues, token refresh failures, and analytics DB outages, and documented resolutions into Standard Operating Procedures (SOPs).
Infrastructure Management: Established and maintained high-availability AWS infrastructure following industry best practices and security standards.

Collaboration & Tools:
Git, GitHub, Jira, Confluence, Slack

Education

Visvesvaraya Technological University (VTU)

Bengaluru

B.E.: Electronics & Communication

System & Network Administration: Managed critical connectivity systems including Site-to-Site VPN, SFTP, SSO, and SSL/TLS certificates (AWS ACM) — including guiding customers through DNS/email validation and promoting DNS validation to simplify renewals — to ensure secure, compliant connectivity.
Linux Systems Administration: Administered and hardened Linux-based EC2 instances (user/permission management, systemd services, log rotation, patching) supporting production workloads.
Cost Optimization: Automated RDS start/stop scheduling in production for cost efficiency; implemented resource tagging across projects to enable cost attribution and identify overspend, informing management decisions on cloud spend reduction.
Storage Lifecycle Management: Designed and implemented S3 lifecycle policies across ~40TB of production data — configuring 30-day auto-deletion for one data set and 30-day transition to S3 Glacier for another — reducing storage costs while meeting retention needs.
Resource Cleanup & Governance: Identified and decommissioned unused/orphaned EC2 instances across secondary AWS accounts (QA, Dev), reducing idle infrastructure costs.
Access Management: Administered IAM roles, users, and policies following the Least Privilege Principle (LPP).

01/2018 - 05/2021

Hewlett Packard Enterprise - DevOps/ Infrastructure Engineer

Platform & Infrastructure: Supported the enterprise infrastructure platforms by deploying and managing Linux, Windows, and virtualized infrastructure for business-critical workloads.
Infrastructure Operations: Handled day-to-day infrastructure operations to ensure the availability, performance, and reliability of production infrastructure.
Automation & Standardization: Automated infrastructure deployment and management tasks to minimize manual labor and promote standardization.
Reliability & Incident Management: Conducted root cause analysis of infrastructure-related incidents and implemented preventive actions to enhance system reliability.
Monitoring & Performance: Monitored system health and resource utilization to detect potential performance and capacity-related problems.
Storage & Data Reliability: Designed and implemented RAID-based storage solutions to ensure data integrity and redundancy.
Testing & Change Validation: Validated infrastructure changes through testing and controlled deployments to reduce downtime and risks.
Security & Compliance Support: Adhered to best practices for infrastructure security and access controls to support enterprise compliance needs.

07/2015 - 01/2016

STS Infotechnologies (Third-party vendor for CISCO) - IT Analyst

Technical Support: Assisted Cisco employees with configuration and setup of tools including Cisco Webex, Jabber, and mobility applications.
Incident Resolution: Provided remote troubleshooting, resolved technical issues, and documented standard resolutions.
Networking Setup: Configured Cisco mobility and networking solutions for enterprise users.
