

Nadeem Ahmed

DevOps Engineer

Professional Summary

DevOps Engineer with experience in AWS, Kubernetes, CI/CD automation, and cloud infrastructure management. Skilled in infrastructure security, monitoring, deployment automation, and production support across scalable environments. Hands-on exposure to Terraform, Jenkins, Argo CD, GitHub Actions, and Amazon EKS with a focus on operational reliability and cloud optimization.

Certifications

- ❖ AWS Certified Solutions Architect Associate
- ❖ Complete Python Bootcamp
- ❖ DevSecOps Essentials
- ❖ Complete Guide to Elasticsearch
- ❖ DevOps Essentials
- ❖ Git Complete
- ❖ Data Visualization with Kibana

Skills

Cloud & Platforms:

AWS (EC2, ECS, S3, RDS, Lambda, Step Functions, Route 53, SNS, CloudWatch, CloudTrail, Inspector, ACM, Workspaces, VPC, VPN), Kubernetes (EKS), Docker

CI/CD & Automation:

Jenkins, GitHub Actions, ArgoCD, Terraform (IaC), Shell Scripting, Python, Ansible

Monitoring & Observability:

Grafana, Prometheus, Kibana, CloudWatch, ELK, Slack Integrations

Security & Compliance:

SOC2, DevSecOps, IAM, SSO/SAML, SSL/TLS (ACM), DDoS, Firewalls, Vanta

Systems & Infrastructure:

EXPERIENCE

05/2022 - CURRENT

Eltropy - DevOps Engineer

CI/CD Pipeline Management: Enhanced deployment workflows using Jenkins, Argo CD, and GitHub Actions to improve reliability and reduce release cycles.

Release Management: Managed end-to-end deployment activities by coordinating with QE, Development, Engineering, and Analytics teams, creating comprehensive checklists and implementing rigorous testing protocols.

Containerization: Migrated applications from EC2 instances to Kubernetes clusters, resulting in improved scalability and resource utilization.

Kubernetes Administration: Supported containerized workloads on Amazon EKS by assisting with application deployments, Kubernetes resource management, scaling activities, and cluster operational support within production environments.

Infrastructure Automation: Utilized Terraform to provision and manage AWS resources including EC2 instances, Site-to-Site VPN tunnels, and Application Load Balancers, improving deployment consistency and reducing manual provisioning effort.

IaC Management: Worked with Terraform configuration files to automate cloud infrastructure deployment and support scalable, repeatable environment provisioning across AWS environments.

Automation & Configuration Management: Assisted in deployment and operational automation activities using Ansible playbooks to streamline infrastructure management and support operational workflows.

Infrastructure Management: Established and maintained high-availability AWS infrastructure following industry best practices and security standards.

Cloud Security Implementation: Implemented baseline cloud security controls by enforcing secure configurations across AWS services, including data protection, access controls, and monitoring practices, to maintain data integrity and minimize security risk.

SOC2 Compliance & Security: Owned SOC2 compliance activities by managing recurring audit cycles, coordinating evidence collection, maintaining control mappings in Vanta, and ensuring audit readiness through established security processes and governance practices.

Linux (RHEL, Ubuntu), Tomcat, RAID, HA Architecture, Root Cause Analysis, Infra Provisioning (QA, Dev, UAT, Prod)

Collaboration & Tools:

Git, GitHub, Jira, Confluence, Slack

Education

Visvesvaraya Technological University (VTU)

Bengaluru

B.E.: Electronics & Communication

Vulnerability Management: Led vulnerability remediation efforts by identifying and resolving security findings using AWS Inspector, applying patches through controlled workflows, validating fixes through testing, and promoting updates safely to production environments.

Access Management: Administered IAM roles, users, policies, and permissions following Least Privilege Principle (LPP).

System Administration: Managed critical systems including SiteVPN, SFTP, SSO, and SSL certificate management to ensure secure connectivity.

Monitoring & Observability: Implemented monitoring and alerting solutions using industry-standard tools to provide real-time visibility into system performance and reliability.

Logging & Monitoring: Assisted in implementing centralized logging and monitoring solutions using ELK stack components and CloudWatch to improve observability, log analysis, and operational troubleshooting across applications and infrastructure.

Incident Management: Implemented CloudWatch alerts integrated with Slack for proactive incident management and response.

Automation: Implemented recurring CloudWatch alarms integrated with Step Functions, SNS, and Lambda for automated alerting.

Data Engineering Support: Optimized Data Engineering infrastructure, managing workflows with AWS Lambda, AWS Glue, and Step Functions.

Cost Optimization: Automated RDS start/stop mechanisms in production for optimized performance and cost efficiency.

05/2021 - 05/2022

Eltropy - NOC Engineer

SFTP Management: Administered SFTP user creation and access across UAT and production environments, ensuring secure and compliant file transfers.

VPN Management: Implemented and maintained AWS Site-to-Site VPN tunnels with Terraform; collaborated with customer firewall teams (Palo Alto, Cisco ASA, Fortinet) and developed a custom keep-alive loop to prevent tunnel timeouts.

Application & Infra Monitoring: Monitored system health via Slack integrations; troubleshoot incidents such as 5xx errors, Kibana uptime, token refresh failures, and analytics DB outages; documented fixes into Standard Operating Procedures (SOPs).

Workspace Automation: Automated AWS Workspaces provisioning using reusable AMI templates, eliminating repetitive setup tasks and accelerating user onboarding.

Security Incident Response: Investigated and mitigated DDoS attempts by fine-tuning AWS Security Groups and firewall rules.

Certificate Management: Provisioned and managed SSL/TLS certificates with AWS ACM, guiding customers through DNS/email validation and promoting DNS validation to simplify renewals.

Environment Provisioning: Reverse-engineered existing setups to design and provision AWS infrastructure for QA and development sandboxes, accelerating test environment readiness.

01/2019 - 05/2021

Hewlett Packard Enterprise - DevOps/ Infrastructure Engineer

Infrastructure Support: Performed root cause analysis and troubleshooting for enterprise hardware, networking, and setup of Windows Server, RHEL, and VMware ESXi environments.

Server Management: Specialized in configuration and maintenance of HPE ProLiant servers (ML, DL, XL, Blade).

Automation: Streamlined update processes and recommended best practices for maintaining robust node clusters.

Data Storage: Implemented RAID-based storage solutions aligned with hardware specifications.

Testing & Issue Resolution: Conducted comprehensive testing and replication to resolve infrastructure issues efficiently.

07/2015 - 01/2016

STS Infotechnologies (Third-party vendor for CISCO) - IT Analyst

Technical Support: Assisted Cisco employees with configuration and setup of tools including Cisco Webex, Jabber, and mobility applications.

Incident Resolution: Provided remote troubleshooting, resolved technical issues, and documented standard resolutions.

Networking Setup: Configured Cisco mobility and networking solutions for enterprise users.
